

## How to Use These Maps:

- 1) Zoom into the property which will contain your project.
- 2) Find the closest powerline which runs parallel to or bisects the property of interest.
- 3) Refer to the legend. The color of the powerline servicing your property indicates the amount of generation which was found to be acceptable in that area.

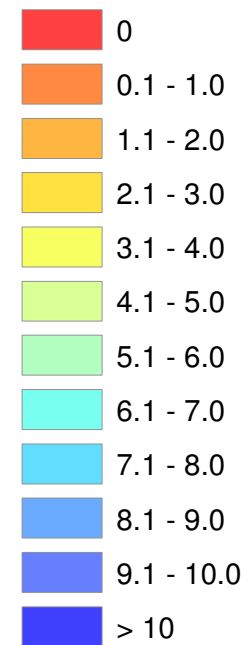

### Example:

In this example the area of interest is 37 Front Street.

### Legend

#### Generation in kW

According to the map above, this address is serviced by feeder 12F5. The colour of the feeder may be compared to the colours in the legend. According to the legend, feeder 12F5 currently has capacity to connect at least 10kW worth of generation.
