Autumn Weather Creates Numerous Power Outages

Thunder Bay, ON – Gusts of up to 60 km/hour and wet leaves on trees are causing numerous smaller power outages throughout the city. At this time, there are no outages larger than 25 customers.

Trees and branches on power lines are a common problem with these weather conditions. Our crews are responding to problems as they are reported.

Thunder Bay Hydro customers are asked to call in if they spot any trees on lines, especially in the rural areas where lines may be more isolated. They should also avoid any lines that are down or close to the ground.

Winds are expected to persist into the evening which will result in continued problems.
